TITLE: Cyclone air cleaner for internal combustion engines. Class 46, No. 174040

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 16, 1965, 116-117

TOPIC TAGS: internal combustion engine, air cleaner

ABSTRACT: This Author Certificate presents a cyclone air cleaner for internal combustion engines as per Author Certificate No. 125974. The cleaner contains both cyclones and contact type air cleaning elements. To improve the air cleaning and dirt capacity of the unit (see Fig. 1) a reflector is placed between the cyclone exits and the air cleaning elements.

E111/E452AUTHORS: Shcherbakov, V.N., Kubatkina, V.V., Motova, L.M.  
Tavetkova, G.N. and Yarochkina, A.N.TITLE: X-Ray Diffraction Investigation of Carbide-Formation  
Processes During Tempering of Hardened Alloy SteelsPERIODICAL: Fizika metallov i metallovedeniye, 1960, Vol.10, No.4,  
pp.622-627

TEXT: The authors state that there are divergent views on carbide-formation effects even in carbon and low-alloy steels as well as in alloy steels. They describe their investigation of steels with various contents of carbon (0.2 to 1.0%) and alloying element (0.6 to 7.7% Cr, 1.2 to 5.5% Mn, 0.3 to 2.2% Mo, 0.1 to 10.3% V and 0.6 to 18.1% W). Chromium steels were hardened from 1150 to 1300, manganese from 950, molybdenum from 1100, vanadium and tungsten from 1200-1350°C. Tempering was effected at 200, 300, 400, 500, 600 and 680°C. Carbide phases formed at different stages of tempering were separated electrolytically and studied by X-ray diffraction (Debye method, chromium radiation), the powder being contained in a celluloid capillary. The phases found for various tempering temperatures

AUTHOR: Solomonov, M. 807/24-58-5-30/31  
TITLE: Scientific-Method Conference on the Problem of  
Breaking-up Rocks by Explosives (Perveys nauchno-  
metodicheskoye sovetskashchiye po problemе drobleniya  
gornykh porod vryvom)  
PERIODICAL: Izvestiya Akademii Nauk SSSR, Otdeleniye Tekhnicheskikh  
Nauk, 1958, Nr 5, pp 143-144 (SSSR)  
ABSTRACT: On February 24-26, 1958 a conference was held on breaking-  
up rocks by explosives at the Institute of Mining, Ak.Sc.,  
ZhM (Institut Gornogo Dela Akademii Nauk SSSR). 100 people from  
32 towns participated and the participants included  
representatives of Works, Research Institutes of the  
Ak.Sc., from various parts of the Soviet Union,  
departmental research institutes and of higher teaching  
establishments.

On section "Following papers were presented on the use of explosives and the breaking-up of rocks":  
"A new test for the examination of explosives in  
crushing operations" by L. I. Baron, B. D. Rossi,  
Institute of Mining, Ak.Sc., USSR;  
"An investigation of the brittleness according to Hess as  
a characteristic of the properties of explosives in  
breaking-up rocks" by S. F. Levichik, Institute of  
Mining, Ak.Sc., USSR;  
"On the influence of the explosive characteristics  
of explosives on the quality of breaking down of highly  
fissured and flooded rocks" by V. I. Kostyuk,  
Institute of Non-Ferrous Metals and Gold;  
"On the laboratory techniques of determining the breaking-  
up of rocks" by L. I. Baron, B. V. Orlov, V.M. Kubatov,  
Institute of Mining, Ak.Sc., USSR.  
In the section relating to determining the dimensions of  
fragments the following papers were presented:  
"On the quantitative indices of the quality of  
breaking-up of rocks and the technique of their  
determination during work with explosives in railroad  
construction" by Yu. Yu. Brodov, ZhM;

Prague, Casopis Lekaru Českých, Vol CII, No 32/33, 16 August 1963, pp 874-880.

Abstract [Authors' English summary]: Female rats (Wistar, own breed) were subject to a hypercapnic and hypoxic hypothermia. Cardiac arrests lasted for at least 25 minutes. Ninety percent of the animals were resuscitated. Small multiple necroses were found in the heart muscle in rats killed after different time intervals. It was found that the severity of changes was pro-

"Oral Mass Vaccination with a New Attenuated Type 3 Poliovirus. State of Serum Immunity of Selected Groups of the Child Population."

Prague, Casopis Lekaru Ceskych, Vol 105, No 36-37, 9 Sep 66, pp 999 - 1003

Abstract /Authors' English summary modified/: Poliovirus 3 Leon 12 a<sub>1</sub>b was used in one region and virus USOL D bac in the other. The second type produced persistent antibodies in a high percentage of children; results with the other are not conclusive. 3 Tables, 8 Czech references. (Manuscript received May 66).

für höchste Spannung und Leistung.

Prague, Czech AS., 1961, 111-132. (German; summary in  
Russian)

TEXT: In low-voltage circuits saturating chokes with d.c.  
magnetisation can control the inductive load, compensate  
capacitive currents etc. Undesirable effects sometimes occur,  
the output current wave shape becoming non-sinusoidal, but this  
may be overcome by using multi-core magnetic amplifiers with  
forced premagnetisation. The number of turns in the d.c. and  
a.c. windings of individual pairs of cores are so selected that  
the wave shape of the output current which is summated from  
individual stages remains sinusoidal whatever the value of the

control current. If the magnetisation curve is of ideal shape it is easy to calculate the number of turns required in the individual windings. However, in practice it is usually best to make the cores of cheaper materials which do not have ideal magnetic characteristics. A new semi-graphical method of calculation has been developed for such cases. Measurements show that the output current wave shape of saturating chokes calculated by this procedure are very close to sinusoidal even with high values of pre-magnetisation current and relatively small number of cores.

AUTHOR: Kubec, V. (Engineer, Candidate of sciences); Sequens, J. (Doctor, Engineer); Vasko, A. (Engineer)

TITLE: Magnetic fields made visible

SOURCE: Bulletin Ceskoslovenske akademie ved, no. 7, 1964, 10

TOPIC TAGS: magnetic field, weak magnetic field, magnetic field visualization

ABSTRACT: In a previous study conducted at the Ustav pro elektrotechniku, CSAV (Institute of Electrical Engineering, CSAV), temperature fields had been made visible (CSAV Bulletin, no. 3, 1963). Using the experience gained, scientists developed a new method of making magnetic fields visible by means of a polariscope. The method is based on the Majorana effect (a colloidal solution consisting of ferromagnetic particles becomes doubly refracting in a magnetic field which is perpendicular to the optical axis of polarized light). A thin layer of magnetooptic liquid illuminated by polarized light is placed in a magnetic field, whose image can then be seen on the screen of a

Card - 1/2

ACCESSION NR: AP4042353

polariscope. A colloidal solution of magnetite prepared at the Fyzikalni ustav, CSAV (Institute of Physics, CSAV) was used. This solution aids in visualizing relatively weak dispersed magnetic fields (e.g., around the winding of electric machines), mainly in cases when it would be difficult to calculate their shape. The inventors of the method are V. Kubec and J. Sequens of the Electrotechnical Institute, CSAV, and A. Vasko, of the Ustav radiotechniky a elektroniky CSAV (Institute of Radio Engineering and Electronics, CSAV). A patent has been applied for.
